1 The project in one minute

What this scenario is

A story-driven scenario for the free game 0 A.D. You play Viriathus and face Rome in Iberia, 147 BC.

The story of Scenario 1 in five pictures

5 pieces make the scenario

2 Words you need

8 words and you are ready

ATLAS
The map editor inside 0 A.D.

MOD
A folder the game loads.
This project is one.

ENTITY
Anything on the map:
tree, soldier, house, hero.

ID (uid)
A unique number per entity.
Viriathus is #611.

PLAYER
A side in the game.
0 = nature, 1 = you.

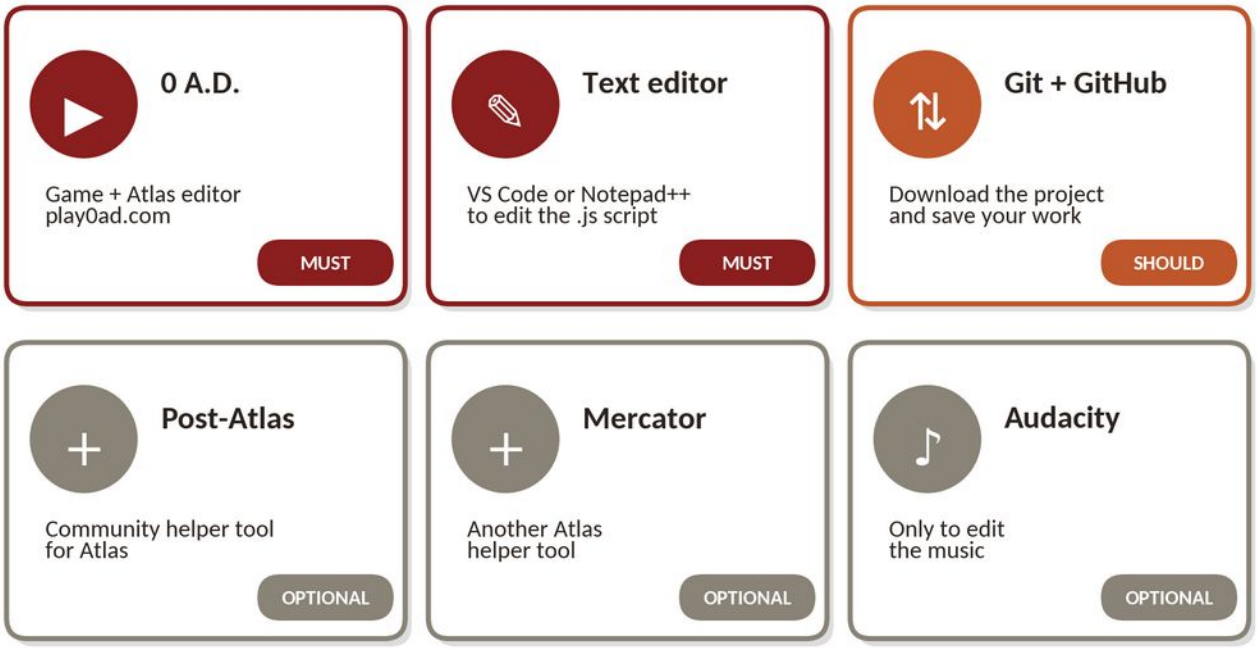

TRIGGER
Rule: when X happens,
do Y.

TRIGGER POINT
An invisible marker
that scripts can use.

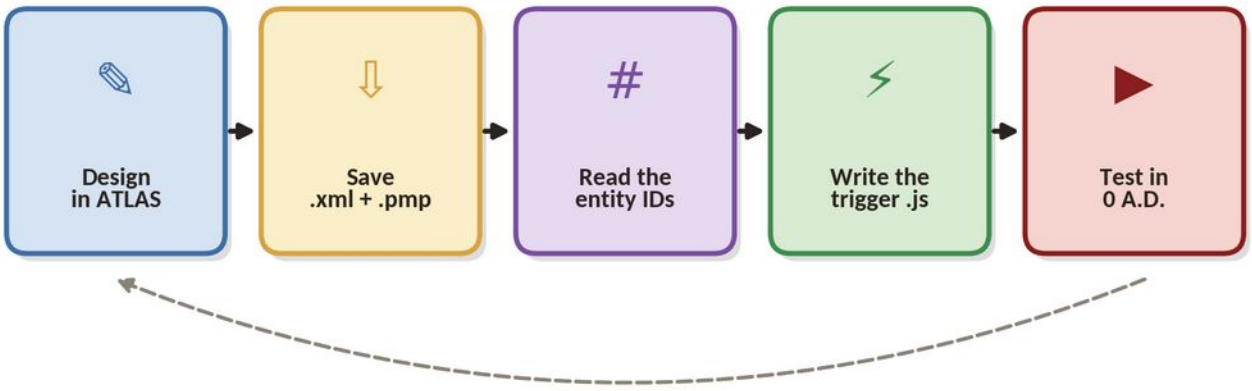

CIV
A civilisation:
iber or rome.

3 What to install

3 must-haves, 3 nice-to-haves

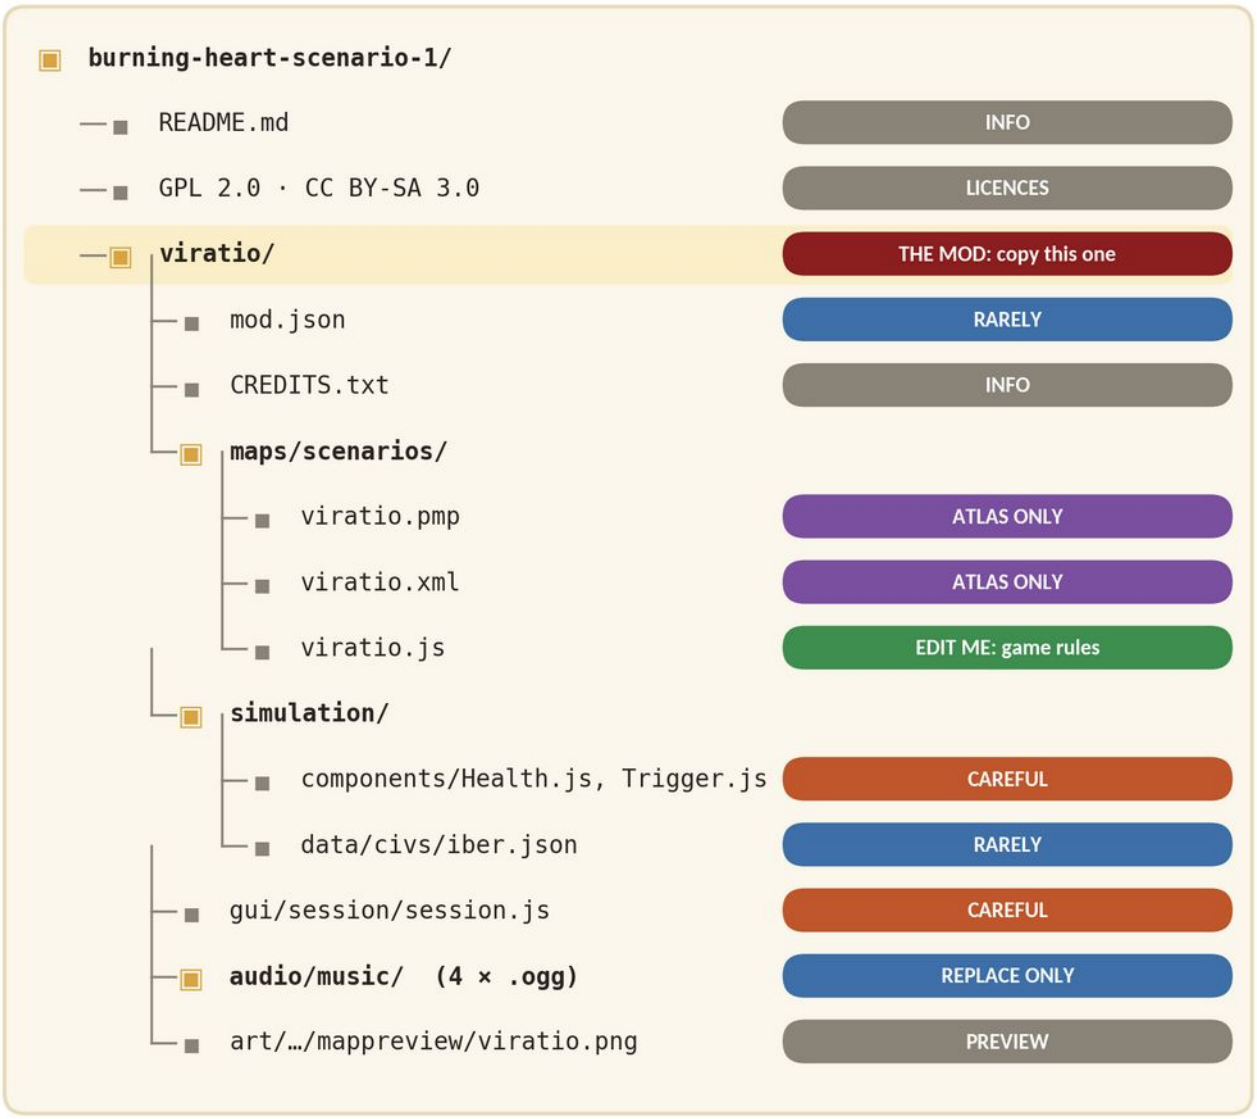

How the work goes

Not right yet? Go around again.

4 The project folder

Where everything lives

Rule of thumb: edit only the green tag. Everything else is Atlas's job, or leave it alone.

5 Install and play

5 steps, 5 minutes

1

Download the project

GitHub → green Code button → Download ZIP → unzip

2

Find the 0 A.D. mods folder

```
Windows   Documents\My Games\0ad\mods
Linux      ~/.local/share/0ad/mods
macOS      ~/Library/Application Support/0ad/mods
```

3

Copy the viratio folder in

Only the folder that holds mod.json, not the whole project

4

Enable it in the game

Main menu → Tools & Options → Mod Selection → Enable → Save and Restart

5

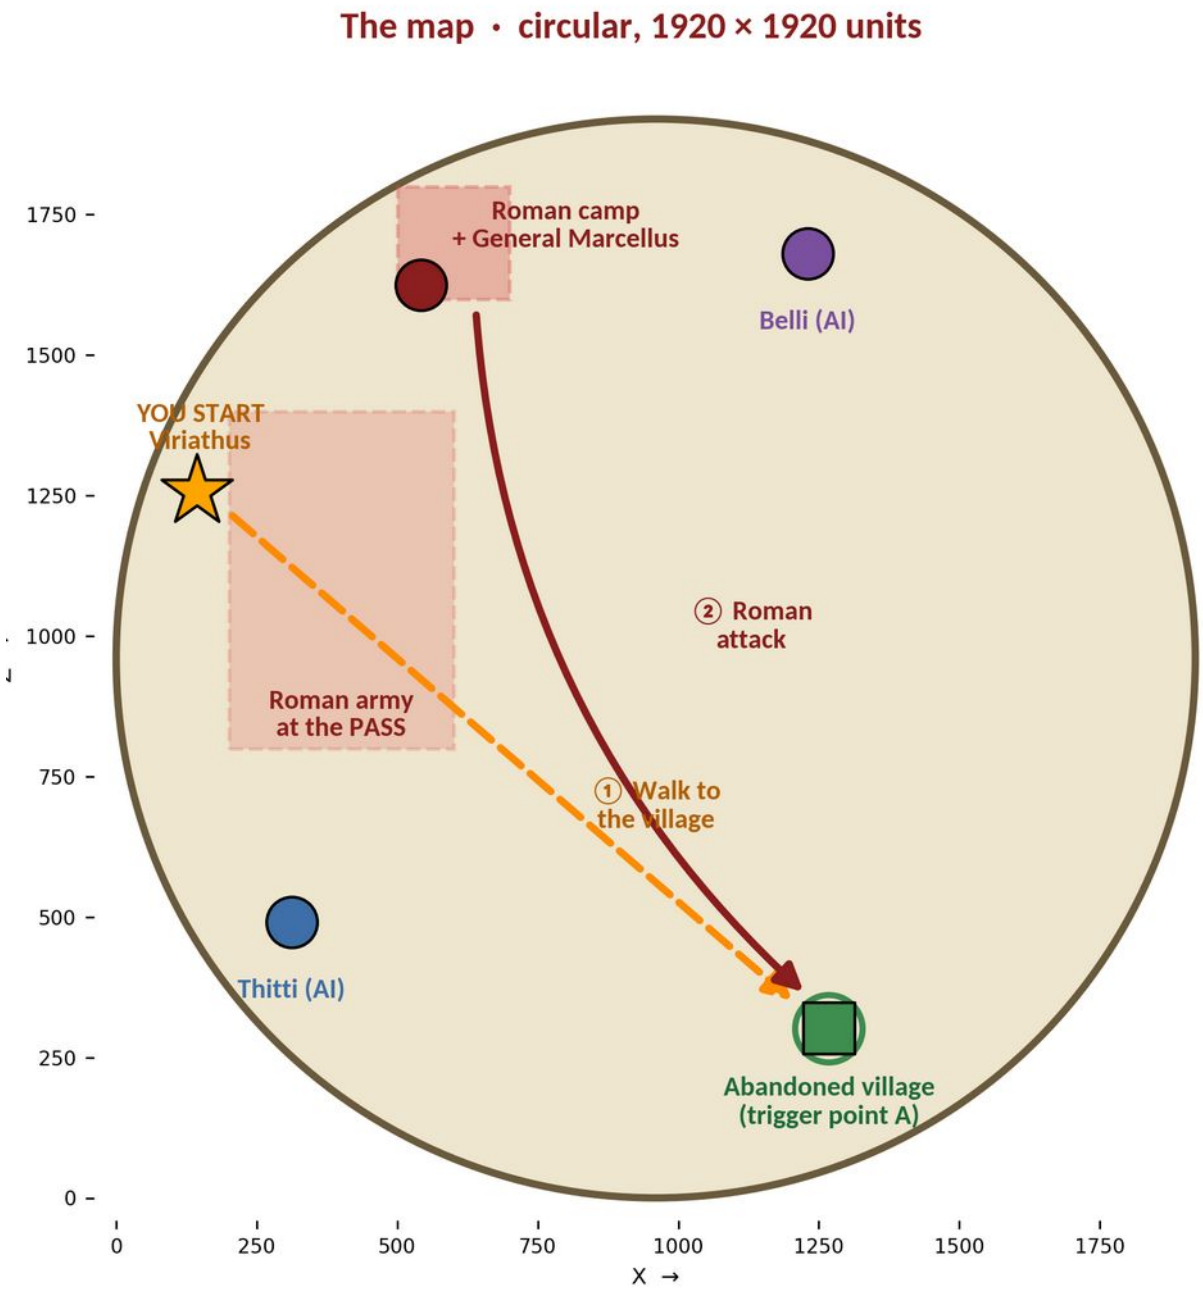

Play!

Single Player → Scenario → Viratio

It does not show up?
Check that mod.json sits directly in mods/viratio/ and not in mods/viratio/viratio/ .

6 The map

Who and what is where

Reading the map: X goes left to right, Z goes bottom to top. Scripts use these numbers.

PLAYER 1	VIRATO
Controlled by	YOU
Civ	Iberians
Army	~70 units + hero Viriathus
Pop limit	200

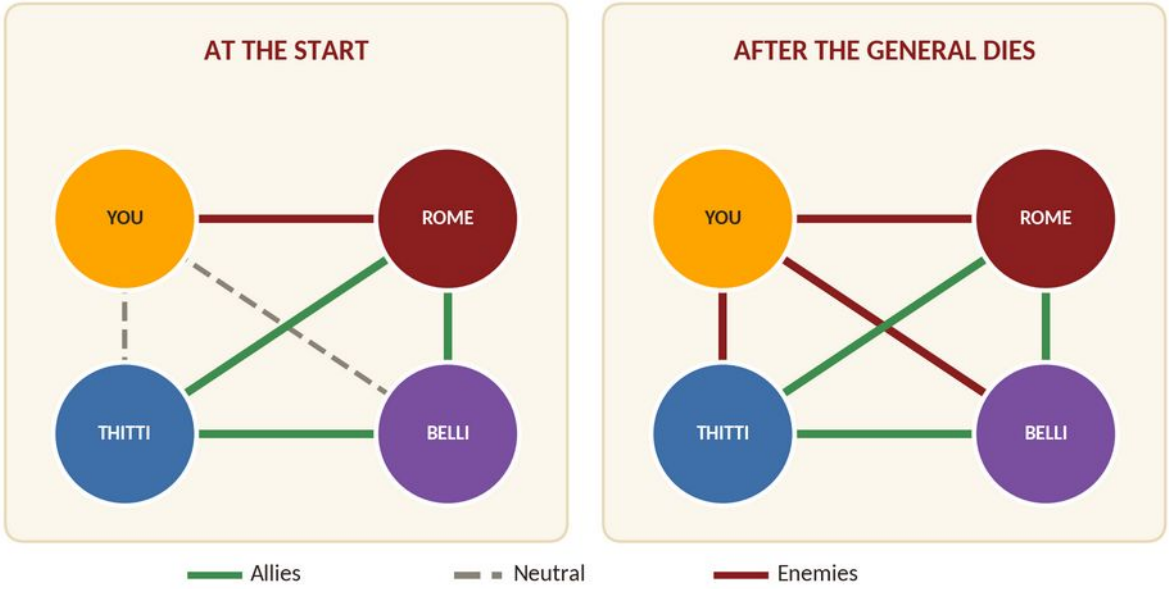

PLAYER 2	LEGION
Controlled by	Script only (no AI)
Civ	Romans
Army	~380 units, camp, towers
Pop limit	–

PLAYER 3	THITTI
Controlled by	Petra AI
Civ	Iberians
Army	Village + 5 units
Pop limit	150

PLAYER 4	BELLI
Controlled by	Petra AI
Civ	Iberians
Army	Village + 6 units
Pop limit	150

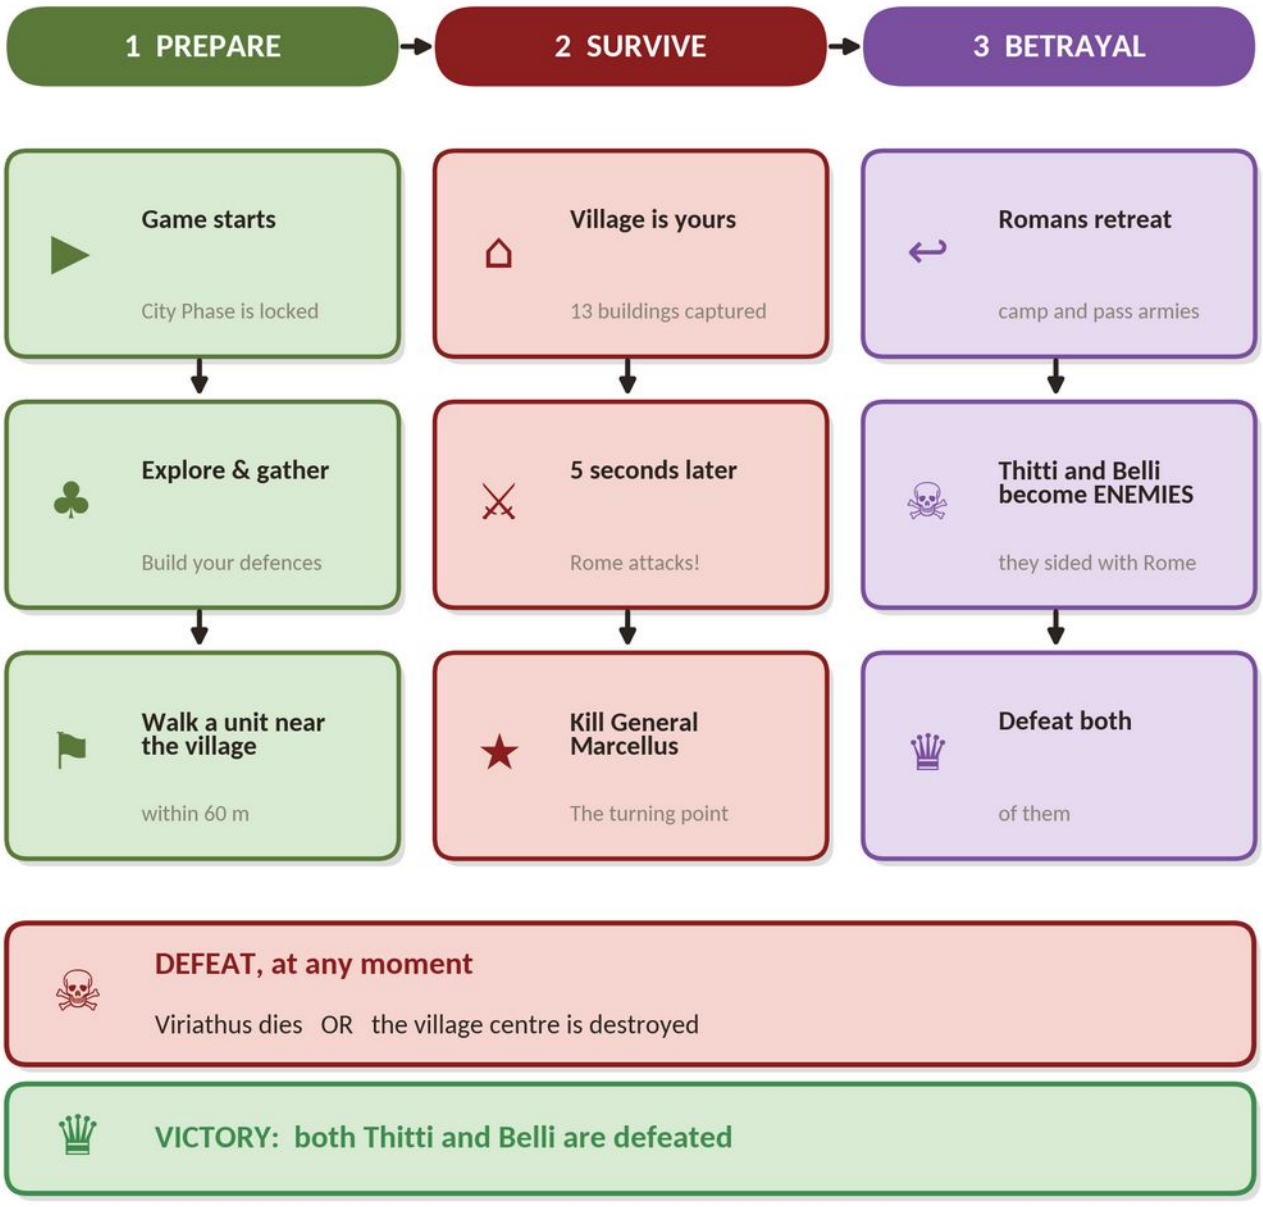

PLAYER 0 GAIA	Nature: trees, animals, and the abandoned village you will capture

Who is allied with whom

7 How the game flows

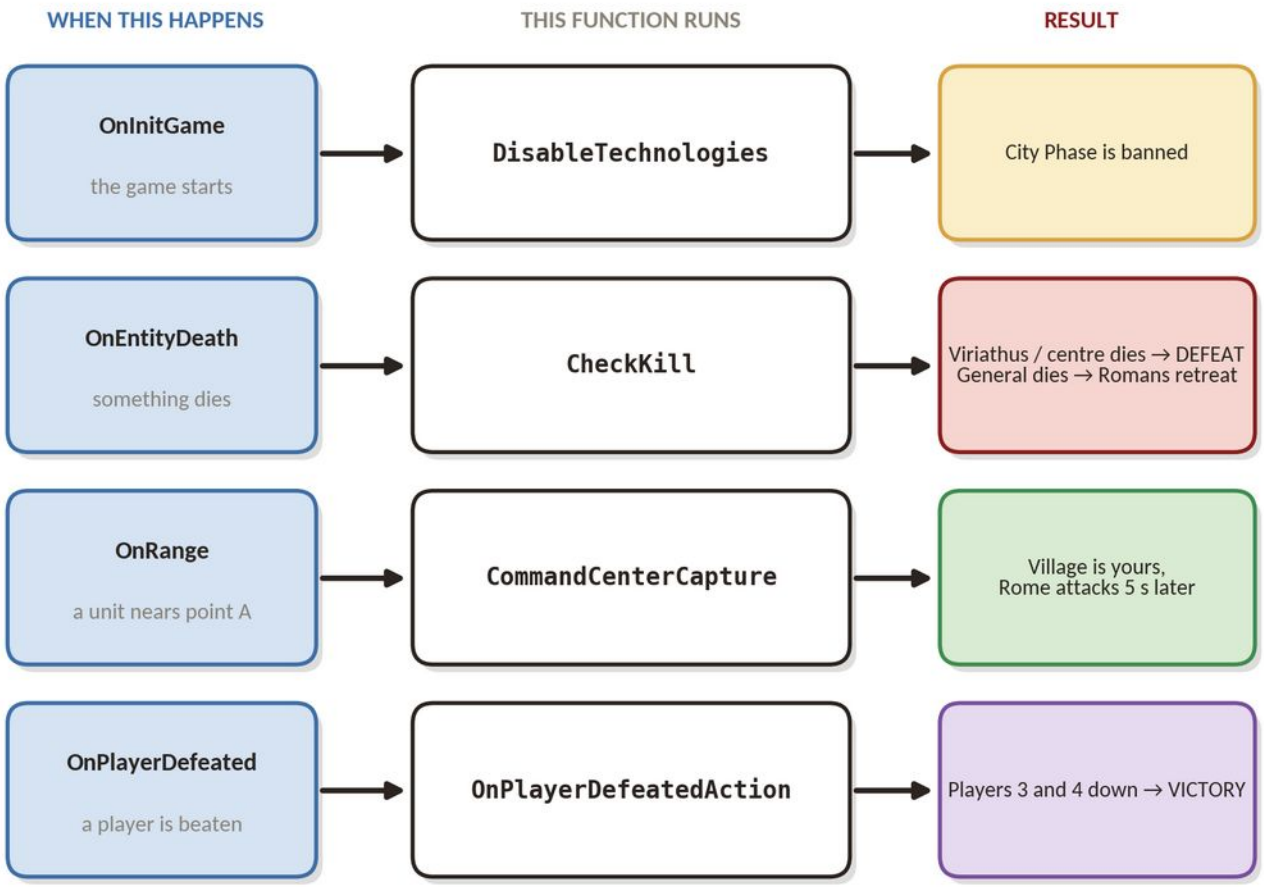

From first step to victory

8 The script, explained

The brain of the scenario

A trigger is a rule: when something happens, run a function. Four of them drive the whole scenario.

These 4 links are written at the very bottom of viratio.js

Delays are in milliseconds

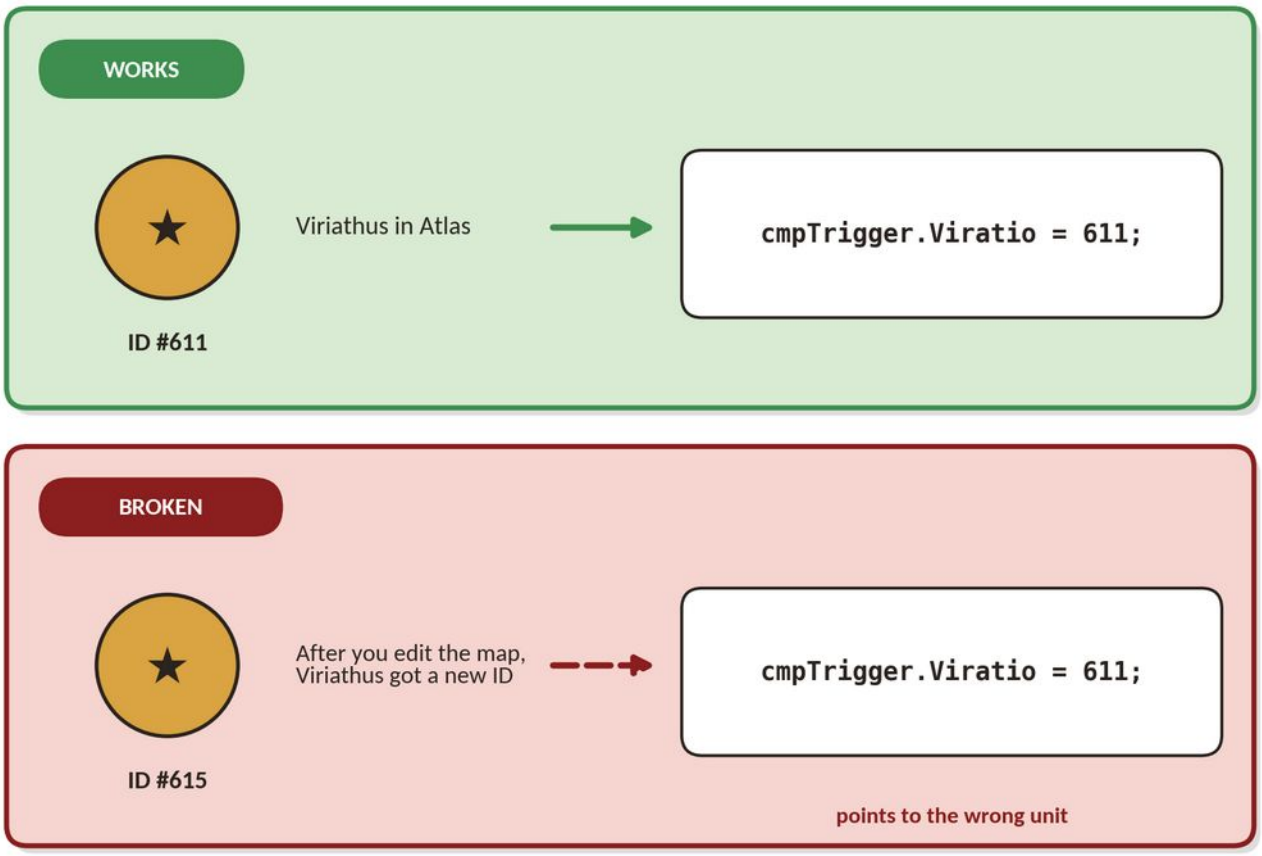

1000 = 1 second. DoAfterDelay(5000, "RomanAttack", {}) means: run RomanAttack in 5 seconds.

Every function in viratio.js, at a glance

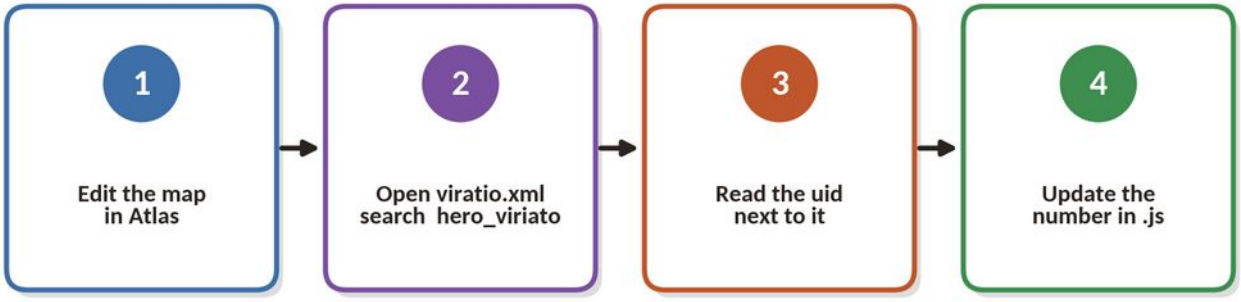

SETUP	`PostInit`	1 s after start: finds the Roman armies, sets diplomacy
SETUP	`DisableTechnologies`	Bans City Phase for all players
DECIDE	`CheckKill`	Who died? Viriathus, centre or general?
DECIDE	`OnPlayerDefeatedAction`	Tracks players 3 and 4. Both down = victory
ACT	`CommandCenterCapture`	Gives you the village, then Rome attacks
ACT	`RomanAttack`	Camp army marches to the village
ACT	`RomanRetreat`	Camp army walks back (605, 1550)
ACT	`PassRetreat`	Pass army walks back (605, 1550)
ACT	`HostileIber`	Thitti and Belli become your enemies
ACT	`DefeatPlayer`	Shows the DEFEAT message
ACT	`PlayerVictory`	Shows the VICTORY message
HELPER	`GetEntsInsideSquare`	Lists entities in a rectangle (minX, maxX, minZ, maxZ)

Numbers written directly in viratio.js

611 Viriathus (hero)	**1183** Roman General	**1127** Village centre	**13** buildings captured (IDs 1127 to 1142)
[3, 4] players to defeat to win	**60** capture range in metres	**5 s** delay before Rome attacks	**605,1550** Roman retreat point (X, Z)

AFTER EVERY EDIT, CHECK THE IDs

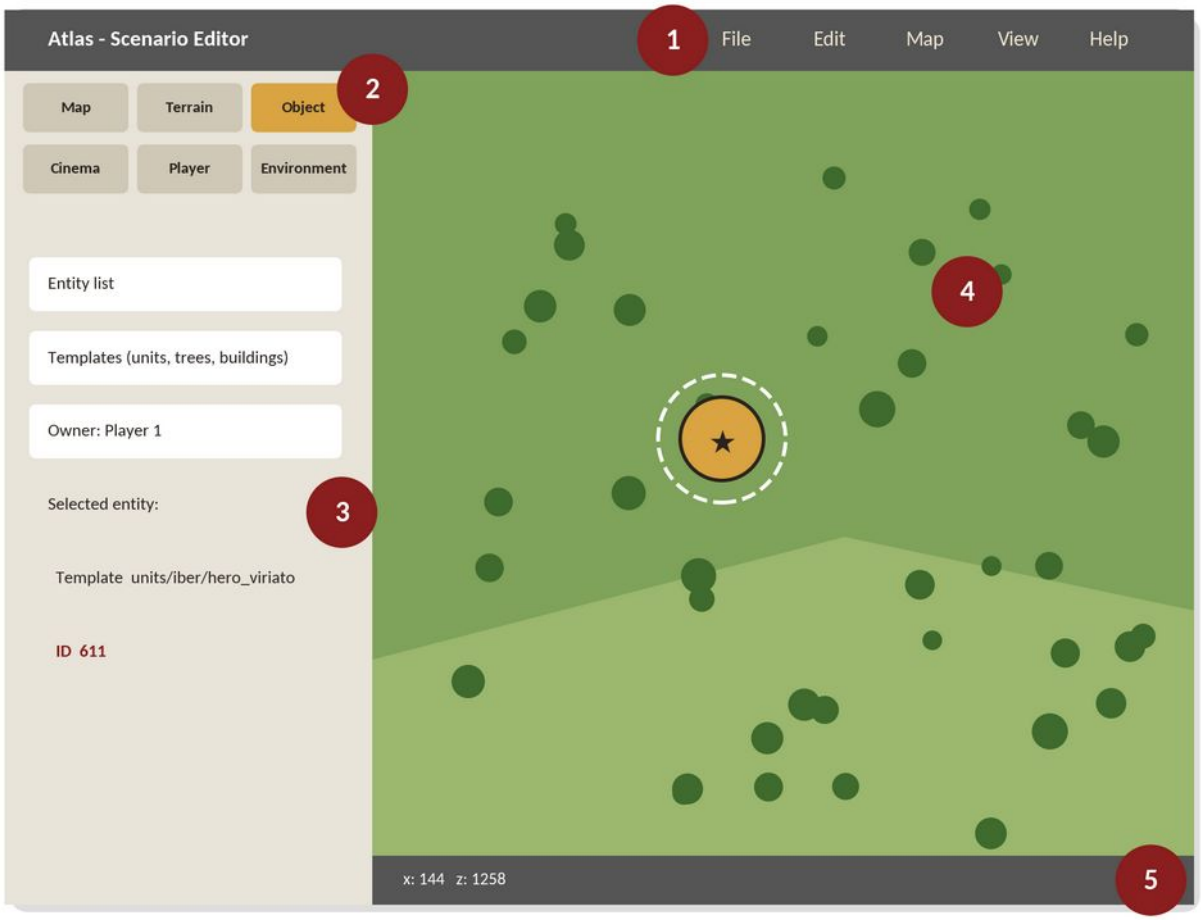

9 Atlas crash course

The map editor, in pictures

Open Atlas in 3 steps

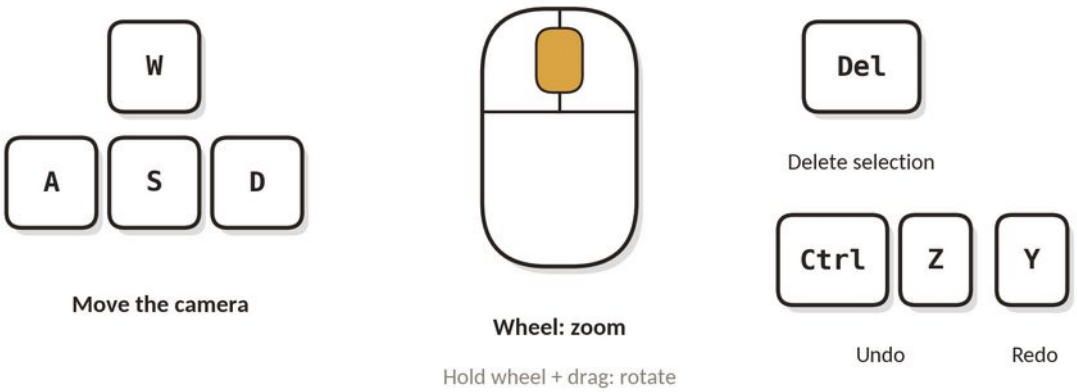

1. Enable the viratio mod (Tools & Options → Mod Selection).
2. Main menu → Tools & Options → Scenario Editor.
3. In Atlas: File → Open → choose Viratio.

Layout can differ slightly between 0 A.D. versions

Move around in Atlas

Shortcuts can differ between versions: check Atlas's Help menu if one fails

Save your work

File → Save As. Atlas writes viratio.pmp and viratio.xml into maps/scenarios/.
Save often. Test in the game after every big change.

10 Make your own scenario

An 11-station roadmap

Your roadmap: 11 stations

Tip: change ONE thing, then test.

Small steps make it easy to find what broke.

5 easy changes to try first

1 Easier village access

OnRange line, bottom of file

```
maxRange: 60
```

```
maxRange: 120
```

2 Delay the Roman attack

in CommandCenterCapture

```
5000
```

```
30000   (30 s)
```

3 Allow City Phase

in DisableTechnologies

```
"phase_city_{civ}"
```

```
(delete the line)
```

4 New ending text

in PlayerVictory

```
"…victory is yours!"
```

```
write your own
```

5 Swap a music track

folder audio/music/

```
old_track.ogg
```

```
same name, new file
```

11 Problems and fixes

When something goes wrong

WHAT YOU SEE	WHAT TO DO
✘ Scenario not in the list	✔ Mod not enabled, or mod.json is one folder too deep
✘ Nothing happens at the village	✔ Trigger point A moved or deleted. Check it in Atlas
✘ Romans never attack	✔ Use a real unit (not a building) within 60 m of point A
✘ Game ends at once, or never	✔ IDs in viratio.js no longer match the map
✘ Script error at start	✔ A typo in viratio.js. Read logs/mainlog.html

Things worth checking or fixing

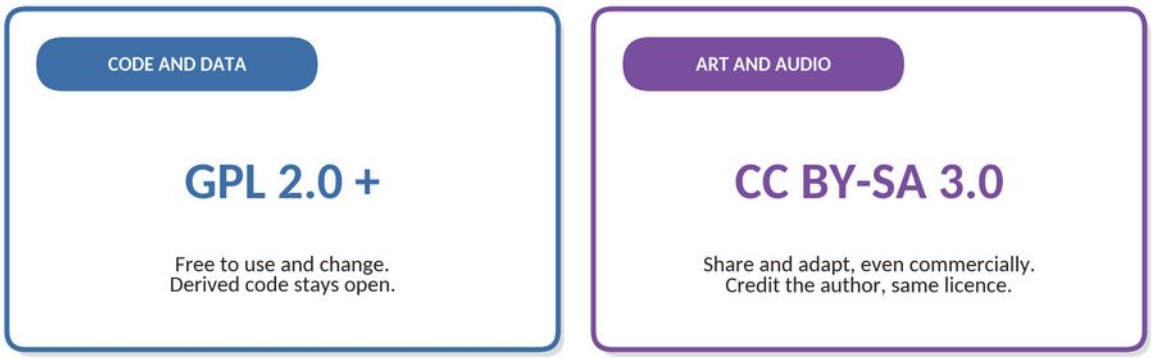

Found by reading the files. Observations, not confirmed bugs.

⚠ **TimerStart**	Called in CommandCenterCapture but never defined in viratio.js
⚠ **Thitti vs Thetti**	Player is named Thitti; the victory message says Thetti
⚠ **Map description**	Still the placeholder: “Give an interesting description...”
⚠ **Zone comments**	Comments on the two Roman zones list numbers in a different order than the function reads
⚠ **Music names**	Credits say “Silence of the Sun”, the file is Silence_of_Iberia
⚠ **Engine copies**	Health.js, Trigger.js, session.js look like copies of game files and may break after game updates
⚠ **Hard-coded IDs**	Moving things in Atlas can silently break the story

12 Credits and licences

Who made it, and what you may do

What you may do
